

# Defense Advanced Distributed Learning Advisory Committee

## What's the DADLAC?

In 1997, in the earliest days of distributed learning, DoD established the Total Force Advanced Distributed Learning (ADL) Action Team to document and coordinate distributed learning initiatives throughout the defense community. Today, that original concept has evolved into the Defense ADL Advisory Committee (or DADLAC, pronounced “dad-lack”). The DADLAC acts as an advisory body to support distributed learning policy stewardship, resource and information exchange, and monitoring of emerging distributed learning technologies and techniques across the Defense community.

## Mission

The DADLAC provides advice to the DoD distributed learning community with respect to the policies and procedures included in Defense Instruction 1322.26, and it helps the DoD distributed learning community adapt to evolving learning science and technical changes in distributed learning environments.

DADLAC members meet bi-annually. DADLAC meetings have been held virtually since the last in-person meeting in Fall 2019.

## Activities and Governance

DoD Instruction 1322.26 (“Distributed Learning”) describes the DADLAC’s authorities and responsibilities, including:

- Promote distributed learning collaboration across DoD
- Foster information and resource sharing to maximize ROI
- Investigate emerging distributed learning capabilities for DoD utility
- Identify common deficiencies and recommend R&D priorities
- Recommend updates to DoD Instruction 1322.26, when applicable
- Advise the DoD distributed learning community on:
  - Implementing high-quality measurement and analysis
  - Safely and accurately recording learning experience data
  - Exchanging data among the DoD Components’ systems
  - Adoption of distributed learning standards and specifications
  - Specification conformance testing methods
  - Other interoperability considerations
